money order**
will be accepted!
No cash payments
please!

Kit Carson Energy, Inc. customers here are some things to remember when placing your next propane order:

1. All trees that surround the area of the propane tank and driveway must be trimmed to provide the propane truck driver and propane truck with a smooth, safe and quick delivery.
2. Make sure your driveway is clear of snow and debris, again to ensure that the driver and truck can provide you with a smooth, safe and quick delivery.
3. Any privately owned bridges that the driver may have to pass over to get to your property must be maintained.
4. Lastly, please make sure that the pathway/driveway to your propane tank is clear of any mailboxes, keypads or anything that may get damaged or cause any harm

*If you have a key or code locked gate please remember to provide us with a spare or the code to be able to provide you with your order.

Pathways/driveways must be at least 10 feet wide to accomodate a bobtail propane delivery truck.

The safety of our customers, employees, equipment and the property of our customers is our top priority.
